D-8400 Regensburg(DE)

⑤④ Resonant cavity for a hydrogen generator.

⑤⑦ A direct current voltage exciter for utilization in a non-electrolysis process and apparatus for separating hydrogen/oxygen gas from water. The non-oxidizing exciters comprise a plate structure with negative potential applied to one such exciter plate (9) and a positive potential applied to the other (15). The spacing between plates comprises a resonant cavity (3) to a particular frequency. The direct current voltage is pulsed at a repetition rate that matches the frequency of the resonant cavity (3). The sub-atomic action of the direct current voltage on the plates is enhanced considerably by the bombardment of the atoms within the resonant structure. A spherical plate construction is described with alternative structures of a resonant line.
